The Online Ordering Opportunity

A growth & margin analysis for **Jigsy's Old Forge Pizza** — Enola, PA

The opportunity in one page

Executive Summary

Jigsy's is a well-loved, award-winning Old Forge pizzeria and brewpub (TripAdvisor 4.5★, ranked #3 of 24 in Enola; Restaurantji 4.4/5 across 236 reviews) that takes orders by **phone and dine-in only** — no website ordering, no app, no cart, and a menu published solely as JPG/PDF images. This is a measurable revenue gap, not a cosmetic one.

Industry data shows online orders run **18–40% larger** than phone orders, online customers order **~67% more frequently**, and **~70% of consumers prefer to order directly** from the restaurant rather than through a marketplace. Meanwhile ~75% of restaurant traffic is now off-premise and digital orders are roughly one-third of all restaurant sales.

Jigsy's direct West Shore competitors — *The Pizza Grille*, *Pizzatown USA*, *Nikoli's* — all already offer online ordering, several through their own branded sites. Jigsy's is currently the digital laggard among its peer set.

The strongest financial argument is the marketplace tax: DoorDash / Uber Eats / Grubhub take 15–30% per order (often 30–40% all-in). A **WiSense-built, owned** ordering channel avoids that commission almost entirely. On a realistic ~\$45 Jigsy's order, owned ordering keeps roughly **\$30 vs ~\$20 through a marketplace** — about \$10 more gross profit per order (worked below).

Where they stand

Jigsy's Today

Business	Jigsy's Old Forge Pizza / Jigsy's Brewpub & Restaurant
Location	225 N Enola Road, Enola, PA 17025 · (717) 732-7708 · jigsyspizza.com
Established	1999 — 'Home of Old Forge Style Pizza'
Signature	Old Forge rectangular 'trays' (red/white, single/double crust, 3/6/12 cut); 'Chick Fil J' specialty; award-winning wings (Harrisburg Magazine)
Ordering today	Phone + dine-in only. No online ordering, no app, no cart
Menu format	Image-only (JPG/PDF) — not mobile-friendly, no search, no live pricing
Ratings (verified)	TripAdvisor 4.5★, #3 of 24 in Enola; Restaurantji 4.4/5 (236 reviews; 75% 5-star, 8% 1-star)

Jigsy's is the only peer with no digital ordering

Competitive Landscape

Restaurant	Area	Online ordering?	How	Owned / Marketplace
Jigsy's (subject)	Enola — 0 mi	No	Phone + dine-in only	—
The Pizza Grille	Camp Hill — ~4 mi	Yes	Own Toast site + DoorDash, Grubhub	Owned + marketplace
Pizzatown USA	Mechanicsburg — ~6 mi	Yes	Own branded site / Slice + DoorDash, Grubhub	Owned + marketplace
Nikoli's Pizza & Catering	Camp Hill — ~4 mi	Yes	Own website ordering, 7 days/wk	Owned
National chains	Camp Hill / Mech.	Yes	Native app + web ordering	Owned

Takeaway. Jigsy's competes on product (authentic Old Forge, award wings) but is the only notable peer with no digital ordering path at all. Competitors capture off-hours and browse-and-add orders Jigsy's structurally cannot — and the leaders lead with their own ordering links (keeping margin), using marketplaces only as secondary reach. That is exactly the model WiSense would build.

What the data says it's worth

The Online-Ordering Opportunity

Bigger tickets — digital beats phone.

- Online orders average **30–40% more** than phone orders; pizza chains specifically saw an **18% increase in customer spend** from online/mobile vs. phone.
- Mechanism: online diners browse the full menu 5–10 minutes (vs. 2–3 on a call), and the system **upsells every order** — add cheese, dips, desserts, size upgrades — prompts staff skip during a rush.

More frequency & loyalty.

- Online-ordering customers visit **~67% more frequently** than non-online customers.
- **~70% of consumers prefer to order directly** from a restaurant over third-party apps — demand for an *owned* channel already exists.

The market has already shifted.

- ~75% of restaurant traffic is off-premise; digital orders are **~one-third of restaurant sales**, up from 12% pre-pandemic.
- Among pizzerias, **84% of operators report online sales**, averaging 26.9% of total sales.
- Shifting orders online **freed up staff time during peak hours** with no additional hiring — more orders, fewer phone errors (*vendor observation, not a hard dollar figure*).

Documented results

Proof: Independent Pizzerias That Did This

Pizzeria	Result	Source
Prima Pizza Kitchen (NJ)	202,000 orders, 32,000+ online, \$5.1M in pizza sales	Slice
Vinny's (Naugatuck, CT)	107,000+ orders, \$3.1M+ gross order value	Slice
Taste of New York (Tampa)	102,000 orders, 11,000+ online, \$2.1M in pizza sales	Slice
City View Pizza	32% online-sales growth in 3 months , no new hires	Thrive POS

Honest caveat: these are vendor-published (Slice / Thrive) and self-selected — treat them as directional proof-of-concept, not guaranteed outcomes. The direction, however, is unambiguous and consistent across independent shops.

The core financial argument

The Margin Math — Owned vs. Rented

Pizzeria economics: target food cost **28–32% of sales**, gross margin ~65–75%. Third-party marketplaces charge **15–30% per order** (commonly 30–40% all-in); an **owned** channel charges a flat fee or just card processing (~3%). Worked on a realistic **~\$45 Jigsy's ticket** (red tray ~\$18.99 + 10 wings + a starter + a 2-liter, using Jigsy's real prices):

Financial Metric	Third-party marketplace (25%)	Owned — WiSense site (~3% card)
Order subtotal	\$45.00	\$45.00
Food cost (30%)	– \$13.50	– \$13.50
Platform / processing fee	– \$11.25 (25%)	– \$1.35 (~3%)
Gross profit KEPT	\$20.25	\$30.15

Result: ~\$9.90 more retained per order on the owned channel — roughly 50% more gross profit. Across even 20 online orders/day that's ~\$200/day / ~\$70K/year in margin a marketplace would otherwise skim. The commission avoided is effectively the ROI that funds the build.

Illustrative model. Thrive POS reports real online tickets averaging \$32.24 vs \$18.99 by phone, so actual online tickets likely run higher — improving the case further.

What customers feel, and how ordering fixes it

Pain Points from Reviews → Fixes

Jigsy's reviews skew strongly positive (75% 5-star). Below are verified operational & review themes mapped directly to digital fixes:

Pain point (verified / structural)	How online ordering fixes it
"Service can be a little slow... not always attentive" (TripAdvisor)	Digital ordering offloads order-taking from staff, freeing servers for tables and cutting phone-tending during rushes.
Menu is image-only (JPG/PDF) — no mobile view, search, or live prices	A real digital menu with photos, modifiers, and current pricing — the #1 fix.
No way to order except calling — busy line, no off-hours capture	24/7 order capture; customers order when the phone is busy or the shop is closed to calls.
Occasional order/spice mismatches ("wings hot, ordered mild")	Structured modifiers & notes reduce miscommunication vs. a noisy phone call.
Limited, easily-misremembered hours (Wed–Sat in summer)	Live hours shown + scheduled orders cut "are you open?" calls.

Owned, not rented

How WiSense Delivers It

A custom, owned website + optional companion app — not a marketplace listing — addresses every point above:

- **Keeps the margin.** Direct ordering avoids the 15–30% marketplace tax (~\$10/order above), and ~70% of customers prefer ordering direct.
- **Fixes the PDF-menu problem.** A searchable, photo-rich, mobile-first menu with live pricing replaces static JPGs.
- **Cuts phone load & order errors.** Structured online orders offload staff and reduce mistakes during rushes.
- **Captures off-hours & overflow.** A 24/7 cart with scheduled pickup grabs orders the phone-only model loses.
- **Grows the ticket.** Built-in upsells (extra cheese, dips, wing sizes, the Chick Fil J, brewpub add-ons) drive the documented 18–40% lift.
- **Builds owned customer data & loyalty** — impossible on a marketplace — supporting the ~67% repeat-order lift.

Jigsy's already has the product, the brand, and the ratings. The one missing piece is the digital ordering rail its competitors already run on — and building it owned rather than rented is where the money is.

Operational Execution: WiSense as Your Forward-Deployed Partner

WiSense does not just hand over code — we act as your **Forward-Deployed Operations Partner** to handle technical setup, staff training, and line-cook integration:

- **Zero-Disruption Hardware Setup:** Direct thermal ticket printing onto your counter/kitchen printer so tickets match Jigsy's exact layout (Tray size, cuts, crust, wing heat).
- **Staff Training & 1-Tap 'Rush Mode':** 30-minute staff onboarding. Includes a counter tablet with a 1-tap 'Rush Mode' button so staff can pause web orders or add prep time if the dining room spikes.
- **Automated Kitchen Rule Enforcement:** We program your exact kitchen logic into checkout (whole-tray specs, topping caps, sauce options) so phone arguments disappear.
- **Done-For-You Care Plan (\$79/mo):** WiSense manages hosting, security, seasonal menu updates, and domain infrastructure so you focus 100% on food.

Recommended Next Steps

- A short working session to confirm menu, pricing, and how orders should flow to the kitchen (pickup first; delivery optional later).
- WiSense builds the owned ordering site (mobile-first, real menu, cart, pay, scheduled pickup) — hosted and maintained by us.
- Soft-launch to regulars, measure ticket size and order volume for 30 days, then expand (app, loyalty, marketplace as secondary reach).

Methodology & Caveats

- Every statistic is cited to a source below. Figures labeled as ranges or vendor-illustrative are estimates, not guarantees.
- Named case studies are vendor-published and self-selected — directional proof, not promised results.
- Yelp / TripAdvisor / Google blocked automated review scraping; the verbatim complaint set is intentionally limited rather than invented. A manual review pass is recommended before final client delivery.
- The Google ~4.5 / ~553-review figure is consistent with verified TripAdvisor/Restaurantji ratings but was not independently re-scraped; treat the count as approximate.
