

Jigsy's Website + Digital Ordering Pilot

A low-risk way to test direct pickup ordering without changing what already works.

**One website. Ordering only when Jigsy's wants it.
WiSense earns \$0.99 only on an accepted online order.**

A simple offer

Item	Jigsy's cost
Core website	\$0
Ordering setup	\$0
Monthly WiSense fee	\$0
WiSense fee per accepted online order	\$0.99

No accepted order means no WiSense fee. Customers pay Jigsy's in person at pickup; WiSense does not process customer payments.

What the pilot is meant to do

- Give customers a direct pickup option without replacing the phone overnight.
- Reduce phone interruptions and make tray, topping, wing-sauce, and pickup-time choices clearer.
- Keep Jigsy's in control of item availability, prep time, and whether ordering is open.
- Hide the public ordering buttons during a rush and reopen them during a slower period.
- Keep all customer payment with Jigsy's at the pickup counter.

This proposal does not promise a revenue number. It creates a controlled test so the owner and staff can decide from real orders.

A measured 30-day rollout

The integration method is chosen only after WiSense sees the current POS, printer, and kitchen ticket flow.

1

Map the real workflow
A 30-45 minute session documents the POS, printer, menu rules, tax settings, pickup timing, refunds, tips, and rush-hour limits.

2

Build a controlled pickup menu
Start with a limited set of high-volume items and the correct required choices. Pickup only; no delivery or alcohol ordering in the pilot.

3

Test with staff before public orders
Verify submission, acceptance and rejection, ticket delivery, sold-out items, prep-time changes, and the pause-ordering control.

4

Soft-launch for 30 days
Jigsy's chooses the days and hours. Ordering can be paused immediately. WiSense supports the first live service and monitors the flow.

5

Keep, adjust, or stop
Review accepted orders, errors, response time, staff feedback, and owner judgment. Continue only if the channel works operationally.

Transparent monthly settlement

Accepted online orders	Monthly WiSense fee
25	\$24.75
50	\$49.50
100	\$99.00

Only accepted orders count. Jigsy's collects the disclosed 99-cent online-ordering fee with the food payment and pays WiSense separately from a monthly statement.

Jigsy's stays in charge

The ordering channel should fit the restaurant's operation - not force the operation to fit the software.

Controls that protect the restaurant

- Jigsy's approves the menu, prices, photos, domain, pickup rules, and launch date.
- Jigsy's collects the full customer ticket in person at pickup.
- WiSense does not process payments, hold restaurant funds, or store card numbers.
- Staff can mark items sold out, change prep time, or pause online ordering.
- When paused, ordering buttons disappear and the normal website stays available.
- Order acknowledgement and kitchen handoff must be tested before launch.
- No performance or revenue result is guaranteed.

What WiSense needs from Jigsy's

One working session	30-45 minutes with the owner or operating manager
Current setup	POS name, kitchen-printer model, and today's ticket flow
Approved content	Menu, prices, modifier rules, hours, pickup policies, and photos
Test partner	One staff contact who can place and verify test orders
Fee settlement	Agreement on who reviews and pays the monthly accepted-order statement

PROPOSED NEXT STEP

Schedule the workflow session.

WiSense will return with the exact order flow, pilot menu, integration method, and launch checklist for approval before accepting any live order request.

Jigsy's Owner Meeting Guide

Private preparation notes for a natural, low-pressure follow-up with the owner.

The goal

Leave the owner with a low-pressure choice:

1. use the free website by itself;
2. test optional pickup ordering during selected slower periods; or
3. revisit ordering later.

Recommended opening

I kept this as one website. The menu, hours, phone number, and directions work whether online ordering is on or off. If the kitchen gets busy, you can pause ordering and the ordering buttons disappear. When things slow down, you can turn it back on yourself.

Then ask:

Can you walk me through what happens today from the moment a phone order comes in until the ticket reaches the kitchen?

The settled Jigsy offer

- Website: free.
- Ordering setup: free.
- Fixed monthly WiSense fee: none.
- WiSense fee: \$0.99 per accepted online order.
- Customer pays Jigsy's in person at pickup.
- Jigsy's collects the full ticket, including the disclosed 99-cent fee.
- WiSense sends a monthly accepted-order statement and is paid separately.
- Rejected or unanswered requests do not count.

What to demonstrate

1. Show the normal website with online ordering paused.
2. Open ordering from the staff console and show the pickup buttons appear.
3. Submit one customer request.
4. Show Accept & Print and Reject.
5. Change prep time and mark an item unavailable.
6. Pause ordering again and show the public buttons disappear.
7. Show the daily accepted-order and WiSense-fee report.

Questions that must be answered

Current operation

- What device would display the staff order screen?

- What printer receives kitchen tickets? Photograph its model label.
- Who accepts or rejects pickup requests during a rush?
- Which days or hours would feel safest for a small pilot?
- What should happen if the internet or printer stops working?

Menu and timing

- Which items should be available first?
- Which options must be required?
- Which items regularly sell out?
- What pickup-time estimate should be the default?
- Should scheduled orders be allowed?

Fee and settlement

- Is the 99-cent online-ordering fee acceptable as a disclosed line item?
- Who reviews the accepted-order report?
- Should the monthly settlement be paid by check, cash, or bank transfer?
- Who confirms the restaurant's tax treatment for the customer ticket?

Safe pilot scope

- Pickup only.
- Pay at pickup only.
- No delivery or alcohol ordering.
- Shared production database and protected staff access before launch.
- Customer accepted/not-accepted notification before launch.
- Printer method chosen only after inspecting the actual equipment.
- Ordering can remain off except during owner-selected windows.

Avoid these claims

- Do not call the current browser-storage demo production-ready.
- Do not promise silent thermal printing before testing the printer.
- Do not promise revenue or order volume.
- Do not imply WiSense processes or controls customer money.
- Do not make online ordering sound permanent or all-day.

Close

The website can stand on its own. If you want to try ordering, we can start small, turn it on only when the kitchen is comfortable, and pause it whenever you want. The next step is just one workflow session, not a contract.

Ask for a date and time only if the owner wants to explore the pilot.

Jigsy's Material Audit - 2026-07-24

An internal review of what is confirmed, what is speculative, and which plan is safe to present.

Recommendation

Give the owner Jigsys_Owner_Leave_Behind.pdf. Keep Jigsys_Complete_Planning_Pack.pdf as WiSense's private preparation packet.

Settled model

- Website and ordering setup are free to Jigsy's.
- There is no fixed monthly WiSense fee.
- WiSense earns \$0.99 only per accepted online order.
- Customers pay Jigsy's in person at pickup.
- Jigsy's collects the disclosed 99-cent fee with the food ticket.
- WiSense is paid separately from a monthly accepted-order statement.
- Rejected or unanswered requests do not count.
- WiSense does not process or hold customer money.

Strongest owner-facing message

Jigsy's gets one complete website. The menu, hours, phone number, directions, and restaurant information always remain available. Pickup-order buttons appear only when staff opens ordering and disappear whenever staff pauses it. Staff can reopen ordering during a slower period or leave it off indefinitely.

This makes the pilot reversible and reduces the fear that online ordering will overwhelm the kitchen.

Demo facts

- The customer and staff demo is deployed.
- The menu contains 52 priced items across eight categories.
- Staff can accept and print or reject requests.
- Staff controls prep time, item availability, and the ordering pause.
- Daily reports show accepted orders and WiSense fees.
- Public ordering buttons disappear while ordering is paused.

Production gaps

- The demo still uses browser-local storage; separate devices do not communicate.
- Production needs shared storage, protected staff access, and notifications.
- The actual kitchen printer must be identified and tested.
- Do not promise automatic printing before that test.

Material warning

Do not use older material that presents Stripe, online card processing, merchant accounts, processor fees, or customer payouts as part of the Jigsy plan.

Do not call the demo production-ready. It is a working preview that will be connected and hardened only if Jigsy's chooses a pilot.
